

## pixel-fox® Makro

### pixel-fox® basic package + MEIJI Short Unimac MS-50D

The pixel-fox® macro package is ideal for low-magnification applications. The single-beam vertical macroscope can be used to look at

- relatively large, intact objects from an overall perspective
- simple surface inspections
- quick image comparisons (e.g. in quality control).

Together with the pixel-fox® basic package with a high-quality digital microscope camera and software for capturing, measuring, saving and documenting images, it is the perfect solution for capturing and evaluating all macroscopic images.

#### Technical data microscope

- 6.4:1 zoom (0.7x to 4.5x), can be operated from both sides
- Ring light illumination
- Free working distance 94 mm
- C mount for camera

## pixel-fox® hardware solution

### pixel-fox® hardware solution

A complete imaging solution always requires an optical system (microscope or macroscope), microscope camera, software and PC hardware (PC, monitor, keyboard, mouse).

With the pixel-fox® hardware solution, we offer a low-cost PC version at a special price which can be combined with all pixel-fox® packages. The specification of the mini PC is adequate for a workstation with the pixel-fox® basic package and Office applications. The pixel-fox® Software is already installed and the Mini-PC is configured.

#### Technical data mini PC

- Intel HD Graphics
- 2GB RAM memory
- 32GB internal SSD Storage
- Windows 10 Home 64-Bit (pre-installed)
- 1x HDMI 1.4, 1x USB 3.0, 3x USB 2.0, 1x LAN RJ45,
- 1x micro-SD card slot
- Dimensions/weight: 15.8x12x3.3 cm / 360g

**Easy imaging - pixel-fox® packages can be combined as required!**
