The 10 kN Quasar is the product of state of the art design, built to the highest quality levels and has many advanced technical features.

Programming tests and monitoring results can be controlled through our powerful and Labtest software, which allows complete and accurate data management in accordance with European, North American and International Standards.

This instrument is suitable for use both in production lines where the operator has to be fast and efficient and can accurately control the test with the optional remote control unit and also laboratory environments where the advanced software lets users analyse the test data. Labtest allows full control of processing, filing, managing, and transmitting data to the company network, database, and performs many other functions.

This Quasar frame has a flexible and modular construction. It can be equipped with various grips and fixtures, as well as extensometers, additional load cells, temperature chambers and many more accessories, for a wide range of applications (tensile, compression, flexure, etc.).

In addition, this user-friendly instrument can be fitted with additional load cells with lower capacities, providing the highest resolution and accuracy for micro-loads.

Universal testing machine Quasar 10
with Micron extensometer

- ☐ Two-column rigid system with 10 kN maximum capacity
- ☐ Suitable for metals, plastics, composites and other materials
- ☐ Stylish design and advanced features
- ☐ Ergonomic and design; 4.0 instrument
- ☐ Flexible and modular design for easy future development
- ☐ Key technical advantages include extremely high resolution of load and stroke readings, as well as minimum test speed of 0.0005 mm/min, for the high performance and most accurate results
- ☐ Manufactured by ISO 9001 Certified Company
- ☐ Excellent price-to-quality ratio

Ethernet connection
